T1V to showcase latest innovations in ThinkHub BYOD collaboration software at Enterprise Connect 2019

T1V will be exhibiting at Enterprise Connect 2019 for the first time in Booth 1201. Visit T1V to experience its latest innovations in BYOD collaboration technology, including ThinkHub and its xCanvas, MultiSite, and Agile add-on software modules.

T1V will make its exhibitor debut at [Enterprise Connect at the Gaylord Palms in Orlando Florida](#), this March 18-20. This will be T1V's first time exhibiting at Enterprise Connect, a show dedicated to the latest systems, software, services and applications for enterprise communications and collaboration. At Enterprise Connect, T1V will be presenting its core collaboration solution, ThinkHub, along with a series of add-on modules that further tailor the collaboration solution for specific needs and user outcomes.

[ThinkHub collaboration software](#) consolidates the moving pieces of teamwork – devices, applications, people, ideas, and content – revolutionizing your team's ability to achieve great work, together. Whether you're giving a presentation, running a brainstorming session, strategizing, and more, our collaborative software allows you to engage with your peers and cultivate exceptional work in real-time, while saving time. ThinkHub is Built for BYOD™ (bring your own device) to support the many devices, programs, and platforms of today's meeting environments.

Also on exhibit will be **ThinkHub xCanvas**, a ThinkHub add-on module that extends the ThinkHub experience beyond a single display to multiple displays dispersed throughout a room. Imagine a room where you have a display on every wall, with the ability to place content anywhere in the room via touch or mobile device. The xCanvas also features SmartGrids, so once a content asset is dragged to the drop zone, the asset will snap into place at that grid's largest size and resolution. Displays can be touch or non-touch; non-touch displays will be controlled solely via mobile devices.

Adam Loritsch, T1V EVP of Sales and Marketing, says, "ThinkHub xCanvas is offered at extremely accessible pricing, and delivers a lot of flexibility not only in the way you can design a room, but also the way that teams can work through content together. We think this solution will especially resonate with those who already have existing video wall solutions, and who are looking for a way to provide a more meaningful collaboration tool for their teams...xCanvas is something that can be layered into existing solutions, either touch or non-touch."

For real-time, room-to-room collaboration, T1V will also be showcasing its **ThinkHub MultiSite** technology at Enterprise Connect. ThinkHub MultiSite bridges global offices into a single, shared workspace. ThinkHub MultiSite can connect up to 10 offices at a time for simultaneous collaboration sessions across disparate locations.

T1V's **ThinkHub Agile**, another ThinkHub add-on module, is a set of tools designed specifically for design thinking and lean-agile teams and organizations. ThinkHub Agile features system of record integration, so users can import/export ThinkHub Agile sessions with third party system of record software like JIRA and CA Rally. This ensures work is never duplicated, and that progress remains intact and persistent between working sessions. What's more, ThinkHub Agile features templates that can be used for retrospectives, daily standups, and other team ceremonies. ThinkHub Agile is built to support remote users as well - so they can contribute to sessions from anywhere via the AirConnect™ mobile application.

T1V invites you to experience ThinkHub, ThinkHub xCanvas, ThinkHub MultiSite, and ThinkHub Agile at Enterprise Connect, Booth 1201.

About T1V

T1V is a visual collaboration company specializing in multitouch, multiuser software for enterprise and education markets. The company's collaboration platform includes ThinkHub® multitouch collaboration, ViewHub™ wireless presentation, and AirConnect™ mobile app - all working cohesively to support a seamless, intuitive user experience for both in-room and remote participants. T1V's suite of collaboration software represents total meeting room solutions that replace much of the hardware we equate meeting room technology with today.

T1V ThinkHub Connect™ active learning technology is designed to support a variety of teaching and learning styles, from traditional lecture to team problem-solving and group-based work. The solution also supports collaboration between students located at off-site locations and allows easy content sharing between remote locations.

All T1V solutions are Built for BYOD™ (bring your own device) to support the many devices, programs, and platforms of today's meeting and learning environments. T1V is a leading innovator in large-scale, interactive software technology, with four issued patents and two patents allowed in multitouch, multiuser software.
