T1V ThinkHub and ThinkHub MultiSite BYOD collaboration software to be showcased at ISE 2018

T1V's ThinkHub and ThinkHub MultiSite visual collaboration software will be exhibited at Integrated Systems Europe 2018.

T1V ThinkHub and ThinkHub MultiSite technology will be on display at Integrated Systems Europe at the RAI Amsterdam - The Netherlands, from February 6-9, 2018. Integrated Systems Europe is the world's largest AV systems integration show, featuring the latest cutting-edge technology, products and solutions being produced for both channel and end-user professionals.

ThinkHub is a visual collaboration solution that consolidates all the moving pieces of teamwork: the devices, applications, people, ideas, and content. ThinkHub is a software-based solution used for brainstorming and ideation sessions, strategic planning, data visualization, presentation creation and delivery, prototyping, interactive videoconferencing, and remote collaboration and working sessions. All ThinkHub sessions can be saved and resumed at a later date for seamless meeting-to-meeting progress.

ThinkHub VC supports videoconferencing integrations with software codecs including Skype For Business, WebEx, and Zoom, with more to come.

ThinkHub MultiSite extends ThinkHub beyond one room to up to ten connected locations, offering real-time, room-to-room collaboration. Organizations can share content and sessions across facilities, while supporting real-time connectivity and teamwork regardless of physical location.

ThinkHub is display and device platform agnostic - meaning it can support all of the different tools already being used and deployed in workspaces and educational environments today. AirConnect is the mobile device software that enables this level of connectivity, which actively supports all Apple macOS, iOS, Android, Windows and Linux devices.

As part of its latest feature release, and to further enable remote collaboration and participation, AirConnect Files™ gives users the ability to exchange files between individual devices and the ThinkHub Canvas. Users can share files to and download files from the interactive Canvas with their AirConnect App. Similarly, users can download any media file from the Canvas to their device - making the exchange of files between team members and remote participants more seamless than ever. AirConnect Files retains the original media file size and resolution, and is currently available for all Mac and Windows devices.

Furthermore, AirConnect Access™ provides remote participants the same ThinkHub controls they would experience if they were in-room. Under the AirConnect Access feature set, participants can view, control, and virtually point in the digital Canvas. Also within AirConnect Access controls, users can download the entire Canvas as a PDF.

T1V and VUCANVAS (T1V's distributor for the UK and Europe) invite you to experience ThinkHub and ThinkHub MultiSite for in-person demos at Integrated Systems Europe, booths NR 10K170 (Philips) and 12-H80.

About T1V

T1V is a visual collaboration software company specializing in multitouch, multiuser applications for enterprise, education, and active learning. The company's collaboration software features BYOD (bring your own device) technology, designed to support the many devices, programs and platforms of today's workforce.

T1V's suite of collaboration software represents total meeting room solutions that are replacing much of the hardware we equate meeting room technology with today.
